

WE ARE INNOVATIVE

OHIO
AMERICAN WATER

**Delivering high-quality
water service to
our customers is,
and always has been,
our primary focus.**

There is nothing more important to life than water, and there is nothing we take more seriously.

Belleville, IL, is home to our award-winning, state-of-the-art, research laboratory. The Belleville Lab is world-renowned for its research, quality control methods and innovations. Every day, we monitor and test water samples to help ensure that the water you receive is of high quality, and each year we conduct nearly one million tests and measurements using the most advanced technology and equipment available.

Our skilled and dedicated team of research professionals tests water samples from all over the country to protect against more than 100 potential contaminants. In fact, our Belleville Lab is so technologically advanced that the United States Environmental Protection Agency (USEPA) asks us to provide input as they develop federal standards and guidelines for safe drinking water – a fact that we are immensely proud of.

For more than 120 years, American Water has been taking care of water. Our lab, our skilled technicians and our scientists work hard each day and take pride in the fact that they help to provide our customers with something that is so essential to everyday life.
