

2008 Annual Water Quality Report

A Message About Your Drinking Water

Dear New Jersey American Water Customer:

As a trusted leader in the industry, New Jersey American Water places a strong emphasis on sharing information about the quality of the water we provide with our customers.

One way we do this is by reporting to you annually the results of our tests on the water we deliver to your home. Please review this Consumer Confidence Report (CCR), which outlines information applicable to your local water system for testing completed through December, 2008. You'll find that we provide water that surpasses or meets all federal and state water quality regulations. In fact, we often address regulations well before they go into effect.

Just as important, New Jersey American Water makes the necessary investments to maintain and upgrade its facilities, so that we can deliver quality water directly to your tap 24 hours a day, seven days a week.

Our customers are our top priority, and we are committed to providing them with the highest quality drinking water and service possible now and in the years to come. In addition to this written report, you can view information about New Jersey American Water and your water system on our website <http://www.amwater.com>. For more information or for any questions about this report relating to your drinking water, please contact New Jersey American Water at 1-800-652-6987.

Sincerely,

John Bigelow
President, New Jersey American Water

About New Jersey American Water

New Jersey American Water is the state's largest water utility, serving over two million people in 176 communities throughout the state.

About American Water

New Jersey American Water is a wholly-owned subsidiary of American Water. Founded in 1886, American Water is the largest investor-owned U.S. water and wastewater utility company. With headquarters in Voorhees, N.J., the company employs more than 7,000 dedicated professionals who provide drinking water, wastewater and other related services to approximately 15 million people in 32 states and Ontario, Canada. More information can be found by visiting www.amwater.com.

Share This Report:

Landlords, businesses, schools, hospitals and other groups are encouraged to share this important water quality information with water users at their location who are not customers. Additional copies of this report are available by contacting customer service at 1-800-652-6987.

How to Contact Us

Thank you... for allowing us to continue to provide you with quality drinking water this year. We ask that all our customers protect our water sources. Please call our Customer Call Center toll-free at 1-800-652-6987 if you have questions:

New Jersey American Water
131 Woodcrest Road
P.O. Box 5079
Cherry Hill, NJ 08034

Water Quality Statement

The data presented in the Table of Detected Contaminants is the same data collected to comply with U.S. Environmental Protection Agency and New Jersey state monitoring and testing requirements. We have learned through our testing that some contaminants have been detected, however, these contaminants were detected well below the levels set by the EPA to protect public health. To assure high quality water, individual water samples are taken each year for chemical, physical and microbiological tests. Tests are done on water taken at the source, from the distribution system after treatment and, for lead and copper monitoring, from the customer's tap. Testing can pinpoint a potential problem so that preventive action may be taken. The Safe Drinking Water Act regulations allow monitoring waivers to reduce or eliminate the monitoring requirements for asbestos, volatile organic chemicals, and synthetic organic chemicals. Our system has received monitoring waivers for synthetic organic chemicals and asbestos.

Atlantic County System – PWS ID# NJ0119002

Table of Detected Contaminants – 2008

Towns Served By This System: | Absecon | Egg Harbor Township | Galloway Township | Linwood | Northfield | Pleasantville | Pomona | Smithville | Somers Point | Wrangleboro |
Those substances not listed in this table were not found in the treated water supply.

Regulated Substances							
Contaminant	Units	Compliance Achieved	MCLG	MCL	Range Detected	Highest Level Detected	Typical Source
Inorganic Chemicals							
Barium	ppm	Yes	2	2	0.004 to 0.093	0.093	Erosion of natural deposits
Beryllium	ppm	Yes	0.004	0.004	ND to 0.046	0.046	Discharge from metal refineries and coal-burning factories; discharge from electrical, aerospace, and defense industries
Fluoride	ppm	Yes	4	4	ND to 0.2	0.2	Erosion of natural deposits
Mercury	ppm	Yes	2	2	ND to 0.0003	0.0003	Erosion of natural deposits
Nitrate	ppm	Yes	10	10	ND to 3.08	3.08	Erosion of natural deposits
Nitrite	ppm	Yes	1	1	ND to 0.009	0.009	Erosion of natural deposits
Selenium	ppm	Yes	50	50	ND to 0.003	0.003	Erosion of natural deposits
Treatment Byproducts							
Total Haloacetic Acids [THAA5s]	ppb	Yes	NA	60	ND to 12	7.6 ¹	By-product of drinking water disinfection
Total Trihalomethanes [TTHMs]	ppb	Yes	NA	80	ND to 49	32.3 ¹	By-product of drinking water disinfection
Volatile Organic Chemicals							
Methyl-tert-butyl-ether (MTBE)	ppb	Yes	0	70	ND to 60.3	60.3	Leaking underground gasoline and fuel oil tanks, gasoline and fuel oil spills
Disinfectants							
Chlorine	ppm	Yes	MRDLG = 4	MRDL = 4	0.27 to 0.50	0.5	Water additive used to control microbes
Radiological Substances							
Alpha Emitters	pCi/L	Yes	0	15	ND to 10.8	10.8	Erosion of natural deposits
Combined Radium (226/228)	pCi/L	Yes	0	5	<1 to 3.6	3.6	Erosion of natural deposits
Uranium (URM)	µg/L	Yes	0	30	2.2 to 16	16	Erosion of natural deposits
Tap water samples were collected from 30 homes in the service area							
Contaminant	Units	Action Level	MCLG	Amount Detected (90th%tile)	Homes Above Action Level	Compliance Achieved	Typical Source
Copper	ppm	1.3	1.3	0.289	None	Yes	Corrosion of household plumbing systems
Lead	ppb	15	0	1	None	Yes	Corrosion of household plumbing systems
Secondary Contaminants	Units	Secondary MCL	Range Detected	Highest Level Detected	Typical Source		
Aluminum	ppm	0.2	ND to 0.344	0.34	Naturally occurring		
Iron	ppm	0.3	0.0263 to 1.12	1.12 ²	Naturally occurring		
Manganese	ppm	0.05	ND to 0.134	0.134 ³	Naturally occurring		
Sodium	ppm	50	4.0 to 54 from levels which would be encountered in drinking water	54 ⁴	Naturally occurring		

¹ This level represents the highest annual quarterly average calculated from the data collected.

² The recommended upper limit for iron is based on unpleasant taste of the water and staining of the laundry. Iron is an essential nutrient, but some people who drink water with iron well above the recommended upper limit could develop deposits of iron in a number of organs of the body.

³ The recommended upper limit for manganese is based on staining of laundry. Manganese is an essential nutrient, and toxicity is not expected

⁴ For healthy individuals, the sodium intake from water is not important because a much greater intake of sodium takes place from salt in the diet. However, sodium levels above the recommended upper limit may be of concern to individuals on a sodium restricted diet.

How Do I Read the Table of Detected Contaminants?

Starting with the **Contaminant**, read across from left to right. A “**Yes**” under **Compliance Achieved** means the amount of the substance met government requirements. The column marked **MCLG, Maximum Contaminant Level Goal**, is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. The shaded column marked **MCL, Maximum Contaminant Level**, is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. The shaded column marked **Range Detected** shows the highest and lowest test results for the year. The column marked **Highest Level Detected** shows the highest test results during the year. **Typical Source** shows where this substance usually originates. Compare the Range Detected values with the MCL column. To be in compliance, the Highest Level Detected must be lower than the MCL standard. Those substances not listed in the table were not found in the treated water supply.

As you can see from the table, our system had no MCL violations again this year. The footnotes and the definitions below will help you interpret the data presented in the Table of Detected Contaminants.

Table Definitions

90th Percentile Value: Of the samples taken, 90% of the values of the results were below the level indicated in the table.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

MRDL (Maximum Residual Disinfectant Level): The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal): The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

NA: Not applicable

ND (None Detected): Laboratory analysis indicates that the constituent is not present.

ppb (Parts per Billion): Corresponds to one part substance in one billion parts of water.

ppm (Parts per Million): Corresponds to one part substance in one million parts of water.

pCi/L (Picocuries per Liter): A measure of the radioactivity in water.

RUL: Recommended upper limit.

What's in the Source Water Before We Treat It?

In general, the sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and can pick up substances

resulting from the presence of animals or from human activities.

Substances That May Be Present in Source Water Include:

Microbiological Contaminants: such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations or wildlife.

Inorganic Contaminants: such as salts and metals which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and Herbicides: which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.

Organic Chemical Contaminants: including synthetic and volatile organic chemicals which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff and septic systems.

Radioactive Contaminants: which can be naturally occurring or may be the result of oil and gas production and mining activities.

For more information about contaminants and potential health effects, call the EPA's Safe Drinking Water Hotline at 1-800-426-4791.

Do I Need to Take Special Precautions?

To ensure that tap water is safe to drink, the U.S. EPA prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at 1-800-426-4791.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. New Jersey American Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Our Water Research Efforts

Cryptosporidium is a protozoan found in surface water throughout the U.S. Although filtration removes Cryptosporidium, the most commonly used filtration methods cannot guarantee 100 percent removal. Ingestion of Cryptosporidium may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, people with severely weakened immune systems have a risk of developing a life-threatening illness. We encourage such people to consult their doctors regarding appropriate precautions to take to avoid infection.

Cryptosporidium must be ingested to cause disease. It can also be spread through means other than drinking water. Researchers with American Water have developed a new, more accurate test for Cryptosporidium in water. For additional information regarding cryptosporidiosis and how it may impact those with weakened immune systems, please contact our customer service center at 1-800-652-6987 or speak with your personal health care provider.

Vulnerable Populations Statement

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial pathogens are available from the Safe Drinking Water Hotline (1-800-426-4791).
